CLOUD SECURITY ENGINEER | AWS | TERRAFORM | AI SECURITY

Cloud Security Engineer with hands-on experience designing, securing, and operating AWS cloud-native and AI-enabled applications. Expertise in least-privilege architecture, infrastructure as code, threat modeling, and implementing security controls for RAG and generative AI systems. Proven ability to translate security requirements into production-ready Terraform and serverless deployments.

CORE SKILLS

AWS Security: IAM (Least Privilege), CloudTrail, CloudWatch, AWS Config, Security Hub, KMS, S3, CloudFront, AWS WAF, API Gateway, Lambda, Bedrock

Infrastructure: Terraform (IaC), Modular Architecture, GitHub, Linux

AI & Application Security: RAG Pipelines, ChromaDB, Prompt Injection Detection, Guardrails, Security Telemetry, Threat Modeling, Policy-Based Controls, Multi-Agent Workflows

Other: FastAPI, Structured Logging, Root Cause Analysis, Auditability

PROJECT EXPERIENCE

Secure AI Learning Platform

Secure AI Application Architecture (Python • FastAPI • Ollama • ChromaDB • RAG)

- Designed and built a secure RAG-based AI learning platform with local LLM execution and multi-agent workflows (Tutor, Quiz, Evaluator, Security).
- Implemented prompt-injection detection, unsafe input classification, policy-based request blocking, and context guardrails to mitigate abuse and data leakage.
- Engineered structured security telemetry, request tracking, and sanitized logging for observability and auditing.
- Applied threat modeling for prompt injection, unsafe retrieval, and agent misuse scenarios.

AskHeyStupid – Public-Facing AWS Application & Terraform Infrastructure

Serverless AWS + IaC (CloudFront • AWS WAF • API Gateway • Lambda • Bedrock • Terraform)

- Designed, deployed, and converted a production serverless application into modular, repeatable Terraform infrastructure.
- Implemented edge security with CloudFront, Origin Access Control (OAC), AWS WAF, HTTPS enforcement, and IAM least-privilege policies.
- Configured API Gateway routing, CORS, and secure Bedrock model invocation.
- Remediated Security Hub findings and improved overall security posture using AWS Config.

AWS Security Lab – Cloud Security Engineering

IAM • CloudTrail • CloudWatch • Athena • Glue • KMS

- Built a hands-on lab focused on least-privilege access, centralized logging, encryption, and troubleshooting.
- Designed CloudTrail + S3 + CloudWatch logging pipelines and validated IAM policies using Policy Simulator.
- Resolved complex access issues with Athena, Glue, and KMS encryption controls.

CERTIFICATIONS

- AWS Certified Security – Specialty(in process)
- AWS Certified Cloud Practitioner
- TryHackMe SOC Level 1 Path (Completed)

TRAINING & PROFESSIONAL DEVELOPMENT

Amazon Bedrock & Generative AI • Prompt Engineering & Responsible AI • Security, Compliance, and Governance for AI Solutions • Cloud Architecture Fundamentals • Cloud Monitoring & Observability

PROFESSIONAL EXPERIENCE

Commercial Real Estate Broker

- Conducted risk analysis and advised clients on investment strategy, exposure, and operational decisions.
- Negotiated complex multi-party agreements with competing priorities and tight deadlines.

Property Owner / Operator

- Managed operational risk, budgeting, vendor relationships, and business continuity across multiple properties.
- Applied cost-control and risk mitigation strategies; holds Texas Property & Casualty Insurance License.
-

ADDITIONAL STRENGTHS

- Strong ability to explain technical security concepts to non-technical stakeholders.
 - Proven troubleshooting and decision-making under uncertainty.
 - High ownership with continuous self-directed learning in cloud and AI security.
-
